

Koskisen Kore in nutshell

Easy solutions for your van

Kore™

Easy solutions for your van

What is Kore?

Kore is a brand of an internationally renowned Finnish wood products specialist, Koskisen Oy, whose customers are amongst other the construction, joinery and transportation industry. Kore produces cargo space lining sets comprising floors, walls and wheel arch covers for the most common delivery vans in Europe.

Easy solutions for your van

The standard Kore product is multi-piece solution for lining your van, packed one set per package including all the needed fixing materials. Floor and lining panels are ready to be installed without damaging your van.

Kore Floors are made of a durable flooring material, Finnish birch plywood coated with a hard wearing overlay with a high quality appearance.

The floors are ready machined to fit each van. The fixing is done via original lashing points using specially designed lashing cups whenever possible. All necessary accessories and fixing material are included in the kit.

Kore Floors are available in two thicknesses: 9 and 12 mm. They are made of slip-resistant KoskiCrown in dark brown or light grey. As an advanced option we offer plastic coated KoskiTech and KoskiFutura DUO floors, both are available in light grey tones.

A standard Kore floor has a 1-4 piece construction depending of the size of the van. It enables easy handling and storage of the floor kit.

Choose Kore's extremely durable lining material for your van interior. Whether your choice is superstrong plywood or the light weight plastic, the panels are ready-machined and pre-drilled to suit all common van types.

Kore linings contribute to a pleasant working environment and increase your van's resale value. The lining protects your cargo-space from bumps and dents and keeps the loading space neat and hygienic.

The lining accessories are designed to allow easy fixing of the vertical linings. The clips, screws, washers and hinges and their locations are specified and optimized for each van model. Use of the original fixing points is prioritized but in some cases, screws are just better to use.

The Kore van solution would not be complete without the finishing touch of the wheel arch covers.

All [Kore Wheel arch covers](#) are vacuum form HD-PE plastic. The material is durable, adapts to low temperatures down to -50 °C and is suitable for recycling.

Naturally, the covers protect the wheel arches from bumps and scrapes - but they also complement the whole van interior. Overall, the Kore wheel arch covers enhance the resale value of your van.

The wheel arch covers are delivered and can be installed without any additional accessories. The covers are held in place by the plywood floor and the wall lining.

If you can't find a suitable product or service for your needs from our standard product range, we are happy to offer you your own [tailor made solutions](#) instead: machining services or other modifications according to your requirements.

Special machining can be added to standard products. For example machining for load securing rails, integrated airline rails, separate or extra fixing points, diverse cut-outs, special modifications... you name it!

We have a wide range of alternatives and all you need to do is help us to find your optimal combination.

Our aim is strict adherence to the customer's requirements. We listen to your specific needs and do our best to solve your problems.

Accessories

Every van model has individually specified accessories. All necessary clips and screws are delivered with the lining or flooring kit making it ready for installation.

Packaging

Kore's standard packaging solution for multipiece floors and linings is compact and easy to handle. Each package contains the parts of the specific set including all the accessories you need for fixing.

For small or large production runs we can deliver the products bulk packed on pallets without the individual wrapping.
